### Theme of the seminar –

A stock market, equity market, or share market is the aggregation of buyers and sellers of stocks (also called shares), which represent ownership claims on businesses; these may include securities listed on a public stock exchange, as well as stock that is only traded privately, such as shares of private companies which are sold to investors through equity crowd funding platforms. Investment is usually made with an investment strategy in mind.

A stock exchange is a marketplace filled with the opportunity of investing for traders to grow their funds. With proper study and analysis, they can get huge positive returns on investments. Profits through trading are much higher than any other investments. However, there is an equal risk probability. Not only do individual investors multiply their funds in the stock exchange, but also huge organizations also raise capital to fund their operations. Overall, a healthy and operational stock exchange can stabilize the economy and increase liquidity in the market.
